Marwa Bouabid

- **Stripe**

Software Engineer, Payments

Applied

- **Vercel**

Frontend Platform Engineer

Interview

- **Linear**

Full-Stack Engineer

Offer

— 01 — THE PROBLEM

The problem with job hunting

- Application emails scatter across inboxes with no structure
- Status updates are buried in threads, easy to miss
- Candidates lose track of deadlines, next steps, and contacts
- No single view of where each application stands

— 02 — SOLUTION

What Job Tracker does

One tool. Zero manual entry. Full pipeline visibility.

One-click inbox connection

Connects Gmail and Outlook inboxes with one-click OAuth sign-in

AI reads your emails

Claude AI reads incoming emails and extracts: company, role, and application status

Automatic classification

Classifies every email as Applied, Interview, Offer, or Rejected automatically

Real-time pipeline view

Surfaces a clean, real-time pipeline — no manual entry required

Architecture

FRONTEND

React + Vite (served at /)

BACKEND

Node.js + Express, session-authenticated REST API (served at /api)

DATABASE

PostgreSQL via Drizzle ORM — jobs, mail accounts, processed emails

AUTH

Google OAuth 2.0 + Azure AD for multi-provider sign-in

AI LAYER

Anthropic Claude classifies email content in real time

DEPLOYMENT

Deployed as a pnpm monorepo on Replit

— 04 — CAPABILITIES

Key capabilities

- **Multi-inbox support**
Link multiple Gmail and Outlook accounts simultaneously
- **Duplicate suppression**
Processed-email tracking prevents re-classification
- **Token refresh**
OAuth tokens silently renewed — no session drop-outs
- **Secure sessions**
PostgreSQL-backed, SameSite=Lax cookies, production secret enforcement
- **Full CRUD**
Edit status, delete jobs, remove linked accounts

Tech stack

FRONTEND

React 18
TypeScript · Vite

BACKEND

Node.js · Express
Drizzle ORM

DATABASE

PostgreSQL
(Replit managed)

AI

Anthropic
Claude API

AUTH

Google OAuth 2.0
Microsoft Azure AD

TOOLING

pnpm workspaces
monorepo

Built and shipped.

Live, working application — not a prototype.

Full stack: auth, AI classification, persistent storage, multi-provider OAuth.

Available to walk through the codebase or demo live.
